

PROBLEM SOLVER

PROBLEM:

Most machine lubricant doesn't last long enough to justify its application.

- Grease lubricants only last a short time, especially in extreme heat or cold temperatures.
- Equipment freezes up in cold temperatures and loses performance at high temperatures.
- Ordinary lubricant must be applied often to remain effective.
- Wet or dirty equipment is difficult to lubricate and keeps corroding.

DRUMMOND®
A LAWSON PRODUCTS BRAND

SOLUTION:

Drummond® Engage with PTFE

- Advanced formulation provides long-lasting protection, even in extreme temperatures.
- Penetrates through water and dirt to lubricate frozen parts.
- Leaves a protective film to control corrosion, protecting longer than ordinary lubricants.
- Spreads out quickly to coat and protect the most intricate parts and machinery

APPLICATIONS:

- Industrial lubrication
- Automotive and heavy machinery lubrication
- Electrical and communications equipment lubrication

INDUSTRIES:

- Automotive
- Equipment Rental
- Manufacturing
- Construction — Heavy Machinery
- Mining
- Oil & Gas

Construction — Heavy Equipment

Rental Equipment
