

## PROBLEM SOLVER

### PROBLEM:

**Ordinary nuts and bolts are of low quality and waste money in the long run.**

- Standard nuts and bolts just don't have the strength for critical applications.
- Bolts stretch and wear.
- Nuts deform and bind, and washers dish.
- Clamps slip and damage body panels or injure technicians.

### SOLUTION:

#### Tru-Torq® Fastener Kits

- 180,000 PSI minimum tensile strength.
- 20% thicker head and nut for easier wrenching.
- Extra thick heat-treated washers resist dishing.
- Balanced fastener system results in a higher clamp load.

#### APPLICATIONS:

- Pulling clamps
- Frame rack clamps
- Pinch weld clamps
- Specialty clamps
