## **NEW A/C Leak Detection Dye**

### **R-1234yf UV Fluorescent Leak Detection Dye**

R-1234yf has become the industry standard refrigerant for environmental reasons and it is estimated that nearly 70% of model year 2019 vehicles have R-1234yf air conditioning systems installed. Air Conditioning Dyes mix with the oil and refrigerant and circulate throughout the A/C system. At the area of a leak, a small amount of dye will escape and stain the area with dye, exposing the leak. UV/Fluorescent dyes allow the operator to see this with the aid of the UV lamp and enhancing glasses.
